Salsabeel Ibraheem Qura'an

Business Information Technology | Data Analyst | Full-Stack Web Developer

Location: Amman, Jordan

Mobile: +962771116604 | Email: salsabeel.quraan123@gmail.com | LinkedIn: https://www.linkedin.com/in/salsabeel-quraan

GitHub: https://github.com/SalsabeelQuraan/SalsabeelQuraan | Portfolio: https://salsabeelquraan.github.io/SalsabeelQuraan/

Bayt.com: https://people.bayt.com/salsabeel-quraan-93448815/

CORE COMPETENCIES

Data Analysis & Reporting • Business Intelligence • ETL Pipeline Design • Time-Series Forecasting • Full-Stack Web Development • REST API Design • Authentication & Role-Based Access Control • Database Schema Design (SQL Server, PostgreSQL) • Data Integrity (ALCOA++) • Project Coordination • Stakeholder Communication

PROFESSIONAL SUMMARY

Recent Business Information Technology graduate from Yarmouk University with hands-on experience in data analysis, business intelligence, and full-stack web development. Delivered an end-to-end production analytics platform for JOSWE Pharmaceutical as a graduation project in collaboration with TechForward (Intaj Foundation), replacing manual Excel-based tracking with a structured ETL pipeline, a Microsoft SQL Server database, a 4-dashboard Power BI solution, and a full-stack Arabic RTL data entry application on a Node.js/Express REST API. Independently built ForecastIQ, a browser-based demand forecasting and inventory planning dashboard with a custom Holt-Winters engine, backtesting (WAPE, RMSE), and stock-out risk logic; RetailPulse, a full-stack inventory and point-of-sale system with transactional stock control and role-based access; and a full-stack task manager on Node.js, Express, and PostgreSQL. Skilled in data cleaning, DAX measure authoring, dashboard design, secure API development, and applying ALCOA++ data integrity principles in production environments.

WORK EXPERIENCE

IT Engineer | JOSWE Pharmaceutical (Trainee) 02/2026 – 06/2026 • Amman, Jordan

Developed the Blistering Production Analytics Platform (BPAP), a production data analytics and quality improvement system built to replace manual Excel-based tracking in JOSWE's Blistering Department across rooms B1 through B7. The system processes raw shift-level production data through a structured ETL pipeline, centralizes it in a Microsoft SQL Server database, and delivers insights through an interactive Power BI dashboard and a controlled HTML-based data entry interface. Delivered in four phases: Excel audit and silent error repair, data cleaning and ETL pipeline development, Power BI multi-dashboard construction, and full-stack data entry UI development.

- Developed 4 interconnected Power BI dashboards: Executive Overview, Production and Yield, Delay Analysis, and Time Analysis, covering Blistering rooms B1 and B3 through B7
- Authored 10+ DAX measures for production KPIs (Utilization Rate, Yield %, Delay Rate, Achieved Batch %, and more) using SUMX, AVERAGEX, CALCULATE, and FILTER patterns
- Built the full-stack data entry UI across 5 pages: Dashboard, session and batch information, activity and time log with auto-calculated fields, and delay entry, using HTML, CSS, and JavaScript with a Node.js/Express REST API backend, RTL Arabic support, and dynamic product dropdowns
- Designed and documented an ETL pipeline covering data extraction from 6 source Excel workbooks, silent error detection, data cleaning, schema validation, and loading into SQL Server, applying ALCOA++ data integrity principles throughout
- Documented 20+ Excel formulas spanning shift duration, overtime, yield, and delay calculations, and converted them into equivalent DAX measures
- Documented state management flows, API endpoint structure, and UI behavior across the data entry application to support handoff and future development

PROJECTS

ForecastIQ – Demand Forecasting & Inventory Planning Dashboard | HTML, Tailwind CSS, JavaScript (ES6), Web Workers, IndexedDB, SheetJS

A retail analytics web app that turns uploaded Excel/CSV sales history into demand forecasts, stock-out risk alerts, and suggested reorders, running entirely in the browser with no data leaving the user's device.

- Implemented a damped additive Holt-Winters forecasting engine in vanilla JavaScript with automatic parameter tuning, seasonality detection, confidence intervals (80/95/99%), what-if scenarios (promotional surge, supply shock), and hold-out backtesting reported as WAPE and RMSE
- Built inventory risk logic covering days of cover, reorder points from configurable lead time and safety stock, suggested order quantities and purchase-order values, auto-approval limits, and critical/low/healthy stock classification
- Engineered a secure file-ingestion pipeline for .xlsx, .xls, and .csv files up to 25 MB: parsing in a Web Worker, zip-bomb protection, guided column mapping with validation, locale-aware number and date parsing (DD/MM vs MM/DD, European decimals), and reporting of skipped rows
- Designed a 6-page responsive dashboard with KPI cards, custom SVG forecast charts, category and region filters, searchable product tables, notification alerts, and CSV export
- Handled data privacy and reliability with IndexedDB storage, configurable auto-deletion, input escaping against XSS, validation of all stored data, a built-in demo dataset, and a downloadable Excel template

RetailPulse – Inventory & Point-of-Sale Management System | HTML, Tailwind CSS, JavaScript (ES modules), Node.js, Express, PostgreSQL, JWT

A full-stack inventory and point-of-sale system for small retail stores that covers the daily workflow end to end: ringing up sales, tracking stock movements, raising purchase orders to suppliers, and reviewing revenue and profit reports.

- Designed and built a REST API on Node.js, Express 5, and PostgreSQL with 20 endpoints across authentication, products, inventory, sales, purchases, reports, settings, and promo codes, backed by a relational schema with seed data (24 products, 21 purchase orders, ~90 days of sales history)
- Ensured stock integrity with database transactions and row-level locking (SELECT … FOR UPDATE) for sales, purchase receiving, and adjustments, sorting cart lines by SKU to avoid deadlocks, and recalculating prices, discounts, tax, and profit on the server instead of trusting client totals
- Built a point-of-sale module with product search, cart and quantity controls, live stock checks, promo-code validation, configurable tax, payment methods (Cash, Card, QR Pay), and order history
- Implemented a purchase-order workflow (Draft → Ordered → Received / Cancelled) where receiving an order automatically adds stock, and an audit trail logging every stock movement with type, quantity, running balance, reference, and user
- Secured the system with JWT authentication, bcrypt-hashed passwords, admin and cashier roles enforced server-side, login rate limiting, a CORS allow-list, and HTML escaping of all rendered user data
- Developed a dashboard and reporting layer with KPI cards, a 14-day SVG sales trend, low-stock reorder shortcuts, weekly revenue and gross-profit reports, sales by category with CSV export, and timezone-aware aggregation (Asia/Amman)
- Delivered full product catalog management with soft-delete archiving, live margin preview, search and stock-status filters, and wrote complete documentation: setup guide, API reference, and role permissions

Link: https://github.com/SalsabeelQuraan/RetailPulse

My Tasks – Full-Stack To-Do Web App | HTML, CSS, JavaScript, Node.js, Express, PostgreSQL

A fast, clean task manager with a vanilla JavaScript front end and a Node.js + Express + PostgreSQL REST API.

- Designed and built a REST API with 5 endpoints (list, create, update, reorder, delete) backed by a PostgreSQL schema, with consistent JSON error responses and correct HTTP status codes (200, 201, 204, 400, 404, 413, 500)
- Implemented server-side validation (title length, category and priority whitelists, calendar-valid due dates) and a 10 KB request body limit

- Secured the app with parameterized SQL queries, whitelisted dynamic column names, XSS-safe rendering via textContent, and environment-based configuration with dotenv
- Built categories and priorities, due-today/overdue indicators, live search with status and category filters, drag-and-drop reordering persisted to the database, undo for deleted tasks, light/dark theme, and summary counters
- Wrote complete project documentation: setup guide, API reference, field rules, and example requests

EDUCATION

Bachelor of Business Information Technology | 2022 – 2026

Yarmouk University | Irbid, Jordan

- Completed an integrated program bridging business management and information technology, equipping graduates with both technical expertise and business acumen
- Studied ERP Systems using Odoo, Business Intelligence and data visualization with Power BI, and Database Management covering design and querying (SQL Server)
- Developed programming skills in C# and Python, alongside Web Development covering both front-end and back-end technologies
- Gained practical exposure to Decision Support Systems, Operations Research, and Project Management through full end-to-end project development
- Graduation project in collaboration with JOSWE Pharmaceutical and TechForward (Intaj Foundation), supervised by Dr. Alaadean Al-Hmoud (see Work Experience above)

Additional coursework: Business Administration Principles, Entrepreneurship, Cybersecurity, Unix Systems, Computer Networking, Systems Analysis and Design, Data Structures and Algorithms

---

SKILLS

Data Analytics and BI: Data Analysis • Business Intelligence • Power BI Dashboard Development • DAX Measure Authoring • Data Modeling • KPI Development • ETL Pipeline Design • Data Cleaning • Data Validation • Excel Formulas • Time-Series Forecasting (Holt-Winters) • Demand Forecasting • Forecast Accuracy Metrics (WAPE, RMSE) • Inventory Analytics

Databases and Querying: SQL Server • PostgreSQL • SQL Querying • Database Schema Design • Transactions & Row-Level Locking • Data Integrity (ALCOA++) • IndexedDB

Programming and Development: Python • C# • JavaScript (ES6) • Node.js • Express.js • HTML • CSS • Tailwind CSS • Web Workers • SheetJS • Full-Stack Web Development • REST API Design and Integration • JWT Authentication • Role-Based Access Control • Input Validation • Secure Coding (parameterized queries, XSS prevention, rate limiting, password hashing) • RTL Arabic UI

Tools and Platforms: Power BI • Microsoft Excel • Microsoft Word • Microsoft PowerPoint • Git & GitHub • dotenv

Soft Skills: Analytical Thinking • Attention to Detail • Problem Solving • Self-Learning and Adaptability • Strategic Thinking & Planning • Time & Task Management • Effective Communication Skills • Research Skills • Stress Tolerance

---

TRAINING AND CERTIFICATIONS

- Full Stack Web Development – HTUx | 2025
- AWS Cloud Practitioner Essentials – Amazon | 2025
- Data Analysis Essentials – Cisco | 2026
